
POC
TG OPS AI
Trigger
SOURCE
TG Database
(LLM)
gpt o3 Model
Top-tier reasoning, best for complex multi-agent coordination, handles ambiguous states well
Master Orchecstrator Agent
1. Which requests are at risk?
2. Which recruiters/queues are overloaded or inactive?
3. Which requests are repeatedly failing?
4. Which clients/accounts are problematic?
5. Where are SLA risks building?
6. What are the top operational bottlenecks?
7. Strategic / Executive-Critical Role Detection
8. Emerging Business Risk Detection
1) Open positions (adjust statuses to your definition of "open")
2) Submissions + aging + assignment + requirement deadline + billable
3) Round-wise interview breakdown (one row per scheduled/panel row)
4) Round-level aggregated feedback (ratings + comments) for "results by round"
Answering these question by creating SQL and sending the SQL Query to the database
(LLM)
Database Query Agent
gpt 4.1 Model
Excellent SQL generation, fast, great at structured/precise output, very cost-efficient
Action will be taken on that particular data, which is being detected
Metrics calculation, numerical reasoning
(LLM)
gpt 4.1 Model
Risk Detection Agent
(LLM)
gpt 4.1 Model
Metrics calculation, numerical reasoning
Analytics Agent
3 Consecutive Detection
YES
Postgresql DB
Analytics Agent
Postgresql DB
KPI Trends
NO
Postgresql DB
Stored in the DB
Action will be intiated using integrated platform, or directly will be passed on the UI after approval
Action & Delivery Layer
KPI(Summary), gets stored in the Database, with a unique id
gpt-4o-mini Model
(LLM)
Formatting Agent
If Three Consecutive Detection are not seen, the UI shows a small alert
Human in the Loop
Simple formatting, cheapest option
Stakeholder Views role-based dashboards
Alerts and Escalation Breach
Yes
Approved
NO
(Optional)
Feedback Loop
This node conatains both Executable Dashboard and a Mail to the Leadership
Notification(Alerts) Via Teams, Outlook, custom integrations, etc.
Postgresql DB
